

## Swift Secure ASX 100 Mining Company to Pilot Swift Access

Further to the announcement on 4 August 2021 with regards to the acquisition of a perpetual license to casting technology, Swift Media Limited (ASX:"SW1") ("Swift" or the "Company") is pleased to announce that leading Western Australian mining company Mineral Resources Limited (ASX:"MIN" or "MRL") will be the Alpha client in Swift's rollout of its new entertainment and communications product, Swift Access.

Swift Access integrates Swift's recently acquired next-generation casting technology with its existing first-release entertainment and communications capabilities. With this technology, MRL's site-based residents will be able to easily cast their favourite streaming apps from their mobile device straight to their TV, all whilst accessing Swift's library of premium first-release content and innovative communications systems. This rollout represents unprecedented value for MRL's FIFO workforce, improving the overall site experience and providing a seamless home-to-site transition.

Swift and MRL have enjoyed a fruitful partnership which has grown to include 2,067 rooms across seven sites. For the trial, MRL will be implementing Swift Access across 264 rooms at their Mt Marion lithium site in Western Australia. If successful, there is potential to extend the rollout to all MRL owned operational villages as part of upgrades to their existing camps. With a significant focus on the health, wellbeing and on-site experience of their workforce, the implementation of Swift Access is a natural next-step for MRL, who are leading the way with improvements to working environments for their people - including plans for new, modern resort-style camps which will offer Olympic-sized swimming pools, wellness centres and restaurants, among other holiday-style amenities.

Mineral Resources' Chief Executive – Mining Services, Mike Grey, says, "Wellbeing is a big focus for us, particularly for our FIFO workforce, and it's important we provide state-of-the-art facilities and make the transition between home and site as seamless as possible.

"MRL is always looking at ways to be an industry leader when it comes to the way we work and our village accommodation is no different.

"Access to a range of entertainment and media options is just one of the ways we're making our sites a home away from home for our people. We're excited to see what new and innovative entertainment and in-room experiences Swift media can bring to our FIFO workers."

Swift Access is a first for the Australian Mining and Resources industry. It is the only solution on the market that offers casting capability with smart device setup, management and monitoring that also maintains user privacy. This allows workers to move seamlessly between Swift's first-release entertainment content and their preferred streaming services, giving them the freedom to watch what they want, when they want.

The innovative casting technology behind Swift Access, coupled with Swift's bespoke network solutions and clever internet and data management provides the ability for sites to preserve maximum bandwidth for streaming and keep associated costs down. This allows Swift Access to offer a premium streaming experience in high density accommodation settings, without crashing the network.

## About Swift

Swift is a specialist technology company delivering network infrastructure, premium entertainment and communications to 60,000 rooms nationally across Mining and Resources, Residential Aged Care and Hospitality environments. We connect and engage communities through entertainment and communications solutions.

This announcement was approved and authorised for release by the Swift Board.
